Access as Quick as

Click, Click. . .You're In!

WITH CLICK2ENTER,

YOUR MOBILE/PORTABLE RADIO IS THE KEY

• Click2Enter taps the state-of-the-art electronics now designed into modern scanner radio technology to give public safety personnel (Law Enforcement, Fire, Ambulance/ Rescue or any authorized user) a quick, safe, reliable and stealthy means to activate gates and security control mechanisms using their portable or mobile radios.

• Click2Enter does away with the cumbersome keys, remote control actuators and access control codes required by other systems because every emergency response vehicle already has the "key"–their radio transmitter (mobile or portable). No need to buy extra equipment or modify your radios.

• The technology is secure. Public safety agencies are issued FCC-assigned radio frequencies for restricted use only. Possession of transmitting devices by non-authorized personnel is tightly controlled and transmitting on those frequencies by outsiders is against the law (both Federal and State statutes).

• Click2Enter responds only to the frequencies and sub-audible private line codes currently programmed into its memory. Editing those frequencies can be done with any RS-232 keyboard interface and standard modem protocol software.

• You now have near-instant access to secure areas to deal with emergencies as they occur. To activate the Click2Enter, the operator must be proximate to the device. Two short transmission pulses of your radio transceiver is all that is required to initiate immediate entry.

Innovative Reliable Flexible Safe Quick

ACCESS USING YOUR TRANSMITTER RADIO
for **PUBLIC SAFETY** *and*
AUTHORIZED USERS

Click2Enter-I SPECIFICATIONS

- Scanner/receiver radio.
- Variable activation range via programming.
- Two radio transmission "clicks" for activation.
- 20 channel capacity.
- Mutual aid compatible.

- Bright activation LED and power LED.
- Time/day/agency memory recall.
- CTCSS, PL/DPL private line (PL) programming capability.
- Auto detect and load of private line codes.
- Compatible with analog or digital radio transmitters, using private line sub-audible transmissions.
- Will operate with carrier only for use with digital radio systems.
- Able to use talk around carriers (car to car) of trunk line radio systems.
- Able to receive radio transmissions to include 800 MHz bands.
- Able to use aircraft AM band frequencies for airport access control operations.
- Latch open and close features.
- Programmable latch open variable 0 to 60 minute reset delay on each channel (0 = pulse ON only).
- Ability to handle high power mobile transmitters and lower power hand held portable transmitters.

- Proprietary programming software built into each unit.
- Field programmable using a Windows CE PDA or laptop computer.
- Programmable via RS-232 interface.
- User-selected PIN for security of programmed frequencies.
- Factory override PIN, via software.
- Able to capture and exhibit activation data log, via software.
- Computer software programmable using standard terminal emulation software (Windows Hyper-Terminal).

- Ability to adapt and use 12V to 24V DC or 12V to 24V AC (Click2Enter-I power will be a regulated 12V DC).
- Lightning surge current protected (current/surge limiting circuit).
- Reflective logo for night identification.
- Unit enclosed in a NEMA Type 4 box, with security screws supplied.
- Relay or dry contact ready.
- Extra set of relay contacts to activate a multitude of devices.
- Separate device available to perform external test/ operation of Click2Enter-I.
- Five year manganese dioxide lithium battery for memory backup.
- Retrofit kits available for operation beyond temperature range specifications (hot & cold).

- Click2Enter adapts the technology inherent in most radio broadcast equipment to work as a radio control mechanism but one with built-in security features.

- Click2Enter will authorize access only after it verifies the FCC-assigned carrier frequency and agency assigned sub-audible communication (private line code) of the transmitter seeking entry. It takes two separate radio pulses and verifications to complete the authorization sequence.

- Click2Enter can afford access to any public safety agency as long as their frequencies are programmed into its memory, thus solving the mutual aid problem which limits the effectiveness of competing devices.

- Programming the Click2Enter is easy. All you need is an RS-232 keyboard interface and standard modem protocol software. We offer our own mini-handheld programmer or you can use your own laptop device.

- The entire activation sequence takes less than four seconds and can be completed from an approaching emergency vehicle or on foot with a portable radio. It's as easy as:

1. Click
Operation Light Activates

2. Release When Light Goes Off
Operation Light Activates

3. Click

4. Release When Light Goes Off
Blinking Light Indicates Gate or Door is Opening
